

JORDI SERVITJA

CG Architect

BIO

Jordi Servitja (October 1, 1986) showed great interest in the arts since his childhood beginning with seven years studying music at the Conservatory of Manresa. More than ten years of study in this field taught him sensitivity and perseverance needed later in the degree of Superior Architecture (ETSAB). His studies allow him to maintain contact with professionals from various artistic fields, like drawing and photography, which he begins to dabble and practice. This eventually led him to redirect their academic training to the visual world of the same: CG architecture and 3D modeling.
